

Government Security Leader

It doesn't get more critical than this. Submarines, F35 strike fighters, Tiger attack helicopters and Abraham Tanks are some of the assets protected by Optic Security Group via Type 1A security systems we provide to the Australian Department of Defence and approved contractors.

The provision of security solutions to government involves working with sensitive components in sensitive settings, and we are trusted by a range of defence, border, law enforcement, justice, corrections, and critical infrastructure agencies to do just that.

Our people

Our experienced High Security Technicians hold Australian Government Security Vetting Agency (AGSVA) clearances and have extensive experience within privileged settings. We are trusted by Government agencies across Australasia to develop, design, install and implement systems to protect the critical government facilities.

Our teams understand the Protective Security Policy Framework (Australia) and the Protective Security Requirements (New Zealand). In New Zealand, our PSR capability has been audited as meeting the highest level set by the New Zealand Security Association (NZSA), and our IT division, Optic Digital, is a New Zealand Government ICT Security and Related Services Panel (SRS Panel) supplier.

Our partners

We have strong channel partnerships with security system vendors trusted by the Australian and New Zealand Governments, including Axis Communications, Milestone, Gallagher, CIC Technology, Indigo Vision, Geutebrück and many others. In fact, in 2019 we were the proud winners of Axis Communications' award for government channel partner of the year.

We're also proud of our status as an authorised installer of all Gallagher's Type 1A solution. Australian Government agencies are sometimes required to use Type 1A security systems as endorsed by the Security Construction and Equipment Committee (SCEC). These systems protect information where its compromise or loss could cause catastrophic damage to national security. Gallagher's SCEC-approved Type 1A solution manages alarms, monitors sensors, and defends system integrity for the highest security Australian Government sites.

A safe pair of hands,
where and when you
need them.

A trusted Public Sector Partner

Although for security reasons we do not share case studies in relation to our high security projects, there is much across our work in the government space that we can talk about. Here's just a few.

Award-winning safe city solution

When Darwin City Council sought 21st century solutions to reduce crime, they looked to us to design, supply, install, and maintain a smart CCTV system in key areas of interest in the CBD. Delivered on time and on budget, the project took out the 2019 Australian Security Industry Association award for 'Special event or project over \$500,000'.

Protecting the COVID border

We recently employed an enterprise security risk management approach to identify vulnerabilities and appropriate enhanced security control options for New Zealand's 32 Managed Isolation and Quarantine Facilities (MIQF). We carried out rapid security system enhancement works for the Ministry of Business, Innovation & Employment across all 32 MIQF sites.

Road, rail, and air safety

We've been at the forefront of transport security and safety applications in South Australia for over a decade – in rail transport, road transport and at the state's airports. Our involvement with the Department of Planning, Infrastructure and Transport (DPTI) Safer Suburbs CCTV Systems, for example, dates back to 2009.

Defending the justice system

As New Zealand Ministry of Justice's trusted security partner since 2007, we were the security provider for the 42,000 sqm Christchurch Justice & Emergency Services Precinct. This largest multi-agency government co-location project in New Zealand's history saw us integrate 1,000 doors, 500 CCTV cameras, intercoms and duress systems in a state-of-the-art control centre.
