USE THERMAL SCANNING FOR TEMPERATURE SCREENING AND PERIMETER SURVEILLANCE

Thermal cameras let people see what their eyes can't: invisible heat radiation emitted or reflected by all objects, regardless of lighting conditions. Whether you are looking to capture workforce or public space body temperatures to ensure appropriate health and safety, or to monitor security in poor lighting situations, dynamic thermal imaging can help you mitigate issues in real time.

With a choice of either ceiling or wall mounted units or 'mobile' tripod and handheld scanners, thermal cameras can be deployed in a wide variety of situations, with real time data and insight instantaneously in the hands of the security teams and management when it's needed.

Accepted throughout the security industry as the best 24-hour visual surveillance option on the market, thermal imaging cameras are an integral component in effectively securing borders, airports, seaports, critical infrastructure, and more.

Combined with advanced analytics, thermal cameras have superb range performance, cover larger areas than standard camera arrays, can overcome camouflage issues and highlight movement that the human eye cannot detect.

WORK WITH AUSTRALASIA'S LARGEST CONVERGED SECURITY PROVIDER

Talk to us today about your thermal camera and scanning needs and let us show you how working with Optic Security can help you ensure the safety of your people and assets no matter where they are.

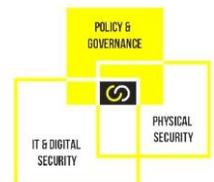

Optic Security Group are Australasia's leading converged security providers with over 1000 customers, working with Government, Commercial and Defence organisations. Optic provide a comprehensive and cost effective 'pay-as-you-go' enterprise wide security and IT services portfolio, giving customers the outsourced expertise they can call on at any time.

You're in good hands

GET YOUR THERMAL SURVEILLANCE IN PLACE QUICKLY AND COST EFFECTIVELY.....

At Optic Security Group we have a team of trained and licensed specialists who help businesses like yours with a comprehensive offering of security and IT services, so you get all of the expertise you need without having to resource your own team.

We can help you understand what kind of Thermal camera and scanning equipment is best suited to the different situational deployments, and how to ensure you comply with any health and safety or privacy requirements at the same time.

In plain English, we'll help you understand the analytics you can gather and act on, and as part of a wider risk portfolio how to optimise your planning and mitigation, so that you continuously keep ahead of any security issues no matter where, or when, your teams are working.

WE UNDERSTAND WHAT YOU DO - AND GET IT RIGHT FIRST TIME.....

Firstly we'll understand your business requirements and how you operate day to day

- By understanding your organisations goals and how and why you want to deploy thermal imaging, our experienced Security and IT leads will be able to make the recommendations right for YOUR unique business and operations, including any financing you might need.

We'll audit and map the equipment and tools you currently use and what you'll need

- Along with auditing all the equipment you already have and what you might need to deliver your requirements, Optic will also review your 'secure access' and regulatory compliance obligations, to ensure you continuously protect your people, assets and networks lawfully.

Review of recommendations and options

- We will discuss with your team the recommended approach to your thermal surveillance strategy and management, any software or hardware you might need and why, and we'll also help explain how to ensure 'cyber security' best practice for your plan.

MARKET LEADING PRODUCTS, PLATFORMS AND ANALYTICS OPTIONS

At Optic we supply and install market leading thermal cameras, hardware, analytics software and accessories as part of a broader Security and IT services portfolio. We'll help you decide on the right solution for you.

We also train your teams in how best to manage your system of choice, as well as assisting with servicing, maintenance, updates and reporting depending on your particular needs.
