

Converged Security Risk Assessment

opticsecuritygroup.com

ASSESS YOUR ENTERPRISE-WIDE PHYSICAL AND CYBER SECURITY RISKS

Today physical and cyber security need to work together to cover all potential threat entry points– it's called converged security.

If someone can get access to your physical premises, they can get access to your 'digital' and visa versa. In a world where those threats evolve everyday it can be hard to know what to look for – which is where Optic Security Group can help.

Our specialist team will assess your holistic 'whole-of-business' enterprise-wide risk profile and, as a trusted partner, work with your team to help rank and prioritise what needs to be done to keep your people, buildings and information assets safe.

GET UNBIASED INSIGHT AND RECOMMENDATIONS ON YOUR THREAT LANDSCAPE

Site and Network Audits to uncover issues

A converged audit highlights the vulnerabilities across your business that could cause your organisation, staff, or customers harm.

The audit covers the **Protective Security Requirements (PSR)** and reviews your physical, information (cyber) and personnel security, governance, and policies. We look at all security risks - whether they are onsite or due to network and other IT exposure. We also look at how ready you are to deal with any incident or threat.

Adhere to Industry Standard Frameworks

Using the government-recommended Protective Security Requirements as well as the US NIST frameworks, Optic Security will help you understand and build a coordinated and integrated risk management strategy and plan.

We'll build a comprehensive picture of the key elements of an **Enterprise Security Risk Management (ESRM)** plan and the standards you should be aiming for and why.

GET PEACE OF MIND WITH A MANAGED SECURITY SERVICE THAT OPERATES 24/7

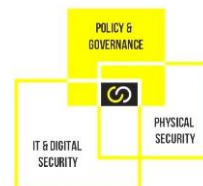

By utilising our skilled and licensed team of professionals with deep expertise and experience, Optic can give you peace of mind without you needing to invest in an expensive in-house team.

Optic Security Group is Australasia's leading converged security providers with over 1,000 customers, including government, commercial and defence organisations, and our 'PSR Capability' has been rated by the New Zealand Security Association audit as 'Managed'. We provide Converged Security Risk Assessments as a standalone offering or as part of an enterprise wide security and IT services portfolio.

GET A RISK ASSESSMENT IN THE CONTEXT OF YOUR BUSINESS GOALS

Optic Security Group is a specialist in threat detection and mitigation plans. Working with your internal teams and suppliers or partners, our experienced team will work with you to find potential vulnerabilities across ALL aspects of your business.

We follow an **Enterprise Security Risk Management (ESRM)** approach, which seeks to understand your business and your business goals, how you value your assets and what your 'risk appetite' is prior to undertaking a process of identifying and assessing the risks to your business:

Understanding your business goals

- The first step is to understand how your organisation operates and the wider ecosystem you work in, including suppliers, contractors and partners as well as the flow of your normal operations, the processes you have in place and the resources you use. Understanding your business also helps us identify people and process areas that need developing.

On site and network audits and surveys

- Using a PSR framework, our trained team will audit your physical facilities and assess your current security set up. IT specialists will also look at your internal and outward facing digital assets and processes and any protection already in place.

Review of recommendations and options

- The Optic team will create a report and discuss with you the current state vulnerabilities found (gap analysis) and recommendations for best practice mitigation.

PUT A PLAN IN PLACE TO MITIGATE RISKS AND ANTICIPATE NEW THREATS

Once you have an up to date risk assessment with mitigation recommendations, Optic can help you deliver a revised Security plan and help support any business case requirements.

Security in a rapidly changing workplace will need to be reviewed on a regular basis and the team at Optic can help you manage that via their 'Managed Security as a Service' portfolio where you can pick and choose the things you need, when you need them.

RISK MANAGEMENT METHODOLOGIES

ESRM

PSR

NIST

ENTERPRISE SECURITY RISK MANAGEMENT CAN SAVE YOU MONEY

- Less risk means fewer claims or harm caused
- Good security and safety procedures usually means better processes that are more efficient to run
- Effective risk management usually means less expensive insurance premiums
- Less employee distraction dealing with issues that can easily be managed in advance
- In an emergency (e.g. a cyber attack), everyone knows the response plan and issues can be resolved quickly, with further damage significantly reduced.
