# Cloud Hosted Enterprise Security Services (CHESS)

[opticsecuritygroup.com](http://opticsecuritygroup.com)

## USE OPTIC HOSTED SECURITY TO MANAGE YOUR CLOUD INVESTMENTS & SECURITY SOLUTIONS

Moving to the cloud has an array of benefits for doing business, but many systems are still firmly rooted in on-premise infrastructure, with little connection to centralised management and the advantages of cloud.

Security weaknesses can put cloud applications, systems, and information at risk; but luckily for you we're both security and cloud experts, so you can take advantage of the cloud for both your physical security management and IT system needs; and we can take care of the cloud security intricacies.

A 2020 Top 10 IT trend is 'Managed Security' which looks to mitigate security risks including data breaches, hijacking of accounts, unauthorised access and abuse of information by employees who might use the information to defraud a company.

Cloud hosted enterprise security services (CHESS, for short) are managed services provided by Optic Security to help keep your cloud usage safe and secure 24/7, without the need for your own inhouse team of experts.

We can also bring the benefits of cloud to your physical security solutions – often giving you significantly better business resiliency, monitoring, and centralised management than purely on-premise solutions.

## PROACTIVE, LIVE, THREAT AND ACCESS MONITORING, REPORTING AND ALERTS

The Optic Cyber and Digital team work alongside and collaboratively with internal/external IT teams to provide a critical and proactive line of defence against both insider and external threats.

Identity and access management  
(IAM)

Managed detection & response (MDR)

Data loss prevention (DLP)

Cloud config & management

User awareness training

Web security

Email security

Penetration testing

Secure hosting of business apps and  
physical security management

Endpoint & IoT protection

Cloud assessments & design

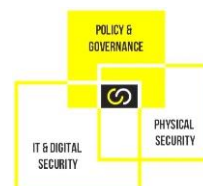

## WORK WITH AUSTRALASIA'S LARGEST CONVERGED SECURITY PROVIDER

Optic Security Group is Australasia's leading converged security provider delivering for over 1,000 customers, including Government, Commercial and Defence organisations. Optic provides hosted security as a standalone offering or as part of an enterprise wide security and IT services portfolio.

## A SECURITY SECTOR LEADER MANAGING YOUR CLOUD SECURITY

The proliferation of cloud use means increasingly skilled cloud security skills are needed to keep everything safe.

It's often not cost effective to hire an inhouse team, which is where Optic's team of cloud security specialists can help.

Waiting until after a security incident to put in place your defences can significantly impair or even halt your day-to-day operations and recovery from a brand and customer perspective can be hard.

Don't miss out on using all that the cloud has to offer - talk to us today and we'll take you through the process in plain business English, giving you peace of mind.

## HAVE YOUR CLOUD SECURITY IN PLACE IN A MATTER OF DAYS.....

### Understanding your cloud hosted security needs

- By understanding how your business operates, including all the platforms, systems and applications in use, Optic can tailor a cloud-based security service that works for you and your employees, suppliers and contractors.

### Risk assessments and audits

- Alongside deploying the tools and reporting needed to work with any other security measures you have in place, the Optic team can help with the wider managed security services, including business continuity, disaster recovery and crisis management – because if you need to react, you should be planning ahead.

### Review of recommendations and options

- Optic will discuss with your team the recommended approach, products and how best to train your staff in best practice management of your cloud solutions and services.

## MARKET LEADING TOOLS AND SERVICES

Optic uses market leading tools from Microsoft, Fortinet, Cisco Meraki, Checkpoint, and others.

To help you manage your cloud security we'll setup solutions that integrate with your current systems and train your teams in how best to use them including any updates, reporting, and governance to suit your operations.
